

## ARTIFICIAL EYE

Normally people do not consult expert eye surgeon for the removal of an ugly, sightless (blind) eye which results in having a poor aesthetic, i.e. patient looks very odd and becomes a solid embarrassment for the rest of their lives.

On the other hand, if eye is enucleated ( surgically removed) by an experienced surgeon like Dr. Irfan Kundi, F.R.C.S (UK), followed by implantation of appropriate explant ( to fix the space in the orbit inside an human eye) with proper alignment of Extra Ocular Muscles into the explant during surgery followed by proper prosthesis manufacturing by an experienced ocularist like Zahid Hafeez at 55-Anarkali, Lahore.

Experience always speaks for it self. Expertise in surgical matters and quality of products used Al-Ain International Specialist Eye Hospital are far superior. Cheap explants and ocular prosthesis become a lifetime impairment for one to live with good quality of life.

Two examples of improper surgery.
