

Fugo Plasma Blade Microtrack Filtration (MTF) enhanced with Haelaflow (cross-linked Haelon):

This is a 20 years' old married lady with 3 children who presented to my hospital on 13/03/13. Her right eye was medically uncontrolled with 33 mm Hg IOP (e Travatan, combigan & Azopt eye drops) though left IOP was around 8 mm Hg. Her BCVA was PL+ve e accurate projection Right and inaccurate projection left with advanced glaucomatous cupping. After OU MTF enhanced with S/C MMC & Haelaflow her IOP without any medications other than anti-allergic eye drops since she has VKC as well, 14mm Hg right and 08 mm Hg left eye. She is retaining BCVA 6/60 Right and CF left til todate. The attached pictures are showing PI on the right side with tiny blebs with still retained Haelaflow on the left in both eyes.
